

SAFETY CULTURE POLICY

Turbine Technology AAEM Limited Liability Company (AAEM LLC)

AAEM's main objective in the field of safety culture is to ensure awareness and acceptance of safety priority by the Company's employees and a continuous application of the safety principles at all stages of implementation of projects for equipment supply to nuclear power plants

This objective is achieved by:

- 1) effective activity in the field of safety culture that takes into account:
 - requirements of the Russian legislation in the field of nuclear power applications;
 - requirements of international standards and IAEA guidelines;
 - requirements of national legislation of countries importing the equipment designed, engineered and supplied to nuclear power plants;
 - expectations in the field of the safety culture of all interested parties, i.e.: consumers, counter-parties, and founders of the Company;
- 2) permanent improvement of activity in the field of safety culture;
- 3) engaging the Company's employees in activities for enhancing the safety;
- 4) monitoring and supporting activities for developing and improving the safety culture at suppliers' organizations.

AAEM is guided by the following safety culture principles: commitment to safety, leadership for safety, awareness, transparency and continuous improvement.

The General Director leads the safety culture activities of AAEM. The General Director commits to provide the Company with the necessary resources, ensure that the objectives are achieved, and create conditions for developing and improving the safety culture.

General Director
